achmadf2301@gmail.com | +6281315576881 | https://www.linkedin.com/in/achmadfg/ | Jakarta, Indonesia

Backend Engineer with over 2 years of professional experience building high-performance backend systems, enterprise applications, and AI-driven services. Specialized in developing scalable REST APIs using Laravel and Flask, architecting Domain-Driven Design (DDD) solutions, and integrating modern AI technologies including LiteLLM and Ollama. Experienced in working with PostgreSQL, MongoDB, AWS S3, and MinIO, as well as implementing authentication and authorization using OIDC-based SSO. Adept at collaborating in agile teams, conducting code reviews, supporting CI/CD pipelines, and delivering production-ready software across diverse industries. Driven by a passion for creating efficient, reliable, and maintainable systems that generate measurable business impact.

EXPERIENCE

PT. Bodha Padma Nawadhya – Jakarta (On-site) ***Oct 2025 – Present***

Backend Engineer

- Built and maintained multiple backend systems and APIs across diverse projects using Laravel (PHP) and Flask (Python).
- Developed Bodha AI API: a Flask-based service providing AI chat, document processing, file management, and CV/resume screening, integrating both Ollama and LiteLLM AI engines with PostgreSQL and MinIO storage.
- Designed a 4-layer Domain-Driven Design (DDD) architecture for a Laravel 12 REST API backend (Teletrace API) with Zitadel OIDC authentication, auto-generated CRUD scaffolding, and real-time WebSocket broadcasting.
- Contributed to an Executive Dashboard application (Laravel 12 + Nova 5) for tracking projects, hierarchical tasks, budgets, and S-curve/health/risk reporting with SSO via Zitadel.
- Collaborated with front-end teams on API integration, conducted code reviews, and participated in CI/CD pipelines using Gitlab

PT. Cloufina Nata Karya – Jakarta (Remote) ***Jan 2025 – Jul 2025***

Backend Developer

Experienced in building the server-side logic, databases, and APIs for scalable web applications. Focused on creating robust systems through collaborative development, clean code practices, and selecting the right technology for the task.

- Developed secure and efficient RESTful APIs and backend services to power web and mobile applications.
- Managed full database lifecycle, from design to query optimization, using PostgreSQL for transactional data and MongoDB for flexible, schema-less content.
- Worked collaboratively with front-end teams to integrate APIs with client-side applications, ensuring data integrity and a smooth user journey.
- Coordinated with a co-developer using agile methodologies, conducting thorough code reviews to maintain high development standards.
- Supported deployment processes and collaborated with implementers to guarantee stable launches and system reliability.

Highlighted Project: Dynamic Web Builder

- Led the backend development for a no-code platform, enabling visual design with complex nested layouts.
- Modeled dynamic document structures in MongoDB to support real-time drag-and-drop operations.
- Built performant APIs for saving and loading project data, directly supporting the frontend editor's functionality.
- Provided critical backend support during deployment to ensure all integrated systems functioned as designed.

Sasfy – Jakarta (Remote) ***Jul 2024 – Jan 2025***

Fullstack Developer Freelancer

- Developed multiple web applications using Laravel as the backend and Next.js with Tailwind CSS as the frontend.
- Managed code repositories using Github, performed regular updates, and resolved git conflicts.

Aido Health Indonesia – Jakarta (On-site) ***Jan 2024 – Apr 2024***

Web Developer Intern

- Developed web-based internal training applications using PHP with the Laravel framework.
- Designed and implemented database structures using PostgreSQL.
- Integrated photo upload feature, storing images on AWS (Amazon Web Services) S3.
- Managed code repositories using Bitbucket, performed regular updates, and resolved git conflicts

PT. United Tractors Tbk – Jakarta (On-site) ***Aug 2022 – Dec 2022***

IT Developer Intern

- Created a web-based asset inventory management system as a Backend Engineer using PHP programming language with CodeIgniter 4 framework.
- Utilized PHPMyAdmin for database management.
- Built a large-scale web service application catering to company users across Indonesia.

Unit Transfusi Darah Pusat PMI – Jakarta (On-site) ***Jan 2022 – Apr 2022***

Web Developer Intern

- Created a web-based soft skill training registration system as a full-stack engineer.
- Application design conducted using Figma.
- Employed PHP language for backend development with CodeIgniter 4 framework and Bootstrap 4 for frontend.
- Managed database using PHPMyAdmin.
- Utilized GitLab for application control and management with superiors.

EDUCATION

Diponegoro University | Informatics | GPA: 3.61 ***Aug 2019 - Aug 2023***

Area of Interest: Web Development, Data Science

- ***Thesis:*** Image Classification of Seat Belt Use in Car Drivers using Convolutional Neural Network with ResNet50 Architecture
